

The 8 Point Lift also known as 'The Liquid Facelift' is a specialised non-surgical treatment using dermal

What does the treatment involve?

It involves injections of Dermal fillers. Syringe or cannula can be used depends on treated area and you

What the result can I expect?

The result is instant and can last to up 18 months. You will look and feel natural. The treatment not only restore the lost volume and lift your face but also improves skin texture and helps to reduce fine lines. Gives your skin young, brightening appearance.

What products do we use?

For 8 point face lift we use Juvederm Vycross products, that is none permanent fillers and their main component is hyloronic acid. Vycross range last longer and are not broken down as quickly as Juvederm Ultra range. In addition they draw more water in to the skin. Plumper more youthful skin results.

Juvederm Voluma: restores volume in the cheeks and chin

Juvederm Volbella: for enhancement and pouting of lips

Juvederm Volift : designed for deeper lines and wrinkles including nose to mouth lines.

What are the possible side effects?

There is very little downtime with this procedure, however with Dermal Fillers, there is always a chance of some down-time as there is always a risk of bruising and small swelling around the treated area that usually resolved within very short period of time.

What is the cost?

The price will be based on the number of syringes that will be required for the treatment and will be discussed with you at your initial consultation appointment.

On average for your first treatment you will require between 3 to 5 syringes of the Dermal fillers.

The following are popular treatment areas:

- Lateral and mid cheek enhancement and volumisation
- Marionette “sad lines”
- Nasolabial folds

Optional extra areas:

- Lip enhancement
- Tear trough treatment

My personal advice:

If you can only budget to have one area treated it is my experience that most people with age loose cheek volume (unless you have been blessed with great genetics), which can contribute to early “nose to mouth lines” and “sad lines”. Often replacing lost cheek volume can improve the appearance of aforementioned areas without even treating these areas. This statement is obviously subject to individual facial assessment and consultation. Using dermal fillers expertly using small volumes where required my clients get the look they dreamed of. Subtle yet sophisticated classy results.
