

We are proud to offer ArqueDerma skin treatment. This information is listed on the ArqueDerma tm website, www.arquederma.com:
ArqueDerma™ Artistic Restoration Lift™ provides natural, more dramatic results *not achievable using conventional filler techniques offered by most clinics*.
Using precepts found in physics and architectural engineering, the ArqueDerma™ technique utilizes 40% less filler to achieve unprecedented, longer lasting results.

Unlike conventional volume *replacement* techniques, the ArqueDerma™ skin treatment technique utilizes dermal fillers as *strategic relocation vectors to redistribute and direct the patient's own tissue toward the facial hollows that have formed*.
Using the ArqueDerma™ technique, your Licensed ArqueDerma™ Practitioner collects excess facial volume that has dropped downward, and artistically redirects it to create a more youthful, aesthetically-pleasing look that 'lifting the veil' to reveal and embellish your natural beauty.

Treatment time: Procedure only takes 45 minutes to 1 hour.

ArqueDerma encompasses an entirely new concept of "blanketing" thin strands of hyaluronic acid dermal filler product, placed in strategic multi-directional vectors, to create an artistic lift of the lax tissues. In this technique, dermal fillers are administered applying an intentional force on the tissues stimulating the fibroblasts and causing them to stretch. Based on the controlled injury theory in which collagen production occurs at accelerated rates post trauma; this technique translates into longer-lasting results, and leaves a hydrating effect on the skin's texture in the treated areas.
