

eDS™ Skin Rejuvenation

The latest innovation from Aestheticare is the EDS Skin Rejuvenation medical skin-needling device. This is the next level from the multi-gold, award winning Genuine Dermaroller to provide to the customer – Even more intensive, Even more controllable, Even more comfortable. Helping make your skin Even smoother, brighter, younger and healthier looking.

Medical skin-needling is an established clinical procedure used as a key treatment for:

- Acne scars
- Sun damaged and ageing skin
- Facial and décolletage lines and wrinkles
- Stretch marks on the body

EDS™ Skin Rejuvenation provides advanced, electronic skin needling procedure. This

stimulates the skin to regenerate and repair itself naturally and safely.

It is most commonly on the face (however we can treat décolletage, stomach legs etc.) to produce thousands of needle columns in the skin. These columns will stimulate the skin to regenerate and repair itself while closing rapidly enabling the skin to recover quickly.

The precision engineering of the device enables us to control the treatment intensity, adjusting the needle depth and speed depending on the area and skin condition. Numbing cream will be applied prior to treatment for comfort. During the procedure a hyaluronic acid solution or advanced mesotherapy solution will be applied to enhance the results.

After an EDS™ Skin Rejuvenation procedure your body will start to naturally regenerate and repair the skin, working below the surface in the dermis. This takes time as new collagen is formed, skin cells are generated and blood supply is enhanced. It can take up to six weeks before visible signs of regeneration and repair are seen and the process will continue over the following months. Normally a series of three procedures every six weeks are recommended. It may be necessary to increase the number required depending on your skin complaint.

After Procedure Skincare – Immediately after you will look as though you had moderate sunburn and your skin will feel warm and tight. This can start to subside within a few hours and be slightly red the next day. We apply a cooling mask straight after the procedure to improve the recovery. Also a skin colour specialist cream to reduce redness. We advise to wear Heliocare SPF50 face gel which must be worn daily for 2 weeks and a recovery cream to be applied until the redness has gone. You will be advised to use tepid water only with clean hands to cleanse the face until redness has gone. No make-up for 12 hours after
