IMPROVED COMFORT: AND EASE-OF-USE

Restylane Vital treatment can be demanding and precise work that can require hundreds of repeated doses.

BENEFITS

:

- Even volume distribution over large skin areas for predictable treatment results.

- Ergonomic design with a firm grip close to the needle for increased working comfort and hand support.
- Controlled dosage of 10 ?l per deposit that minimizes the risk for overdosing.
- More focus on placing the needle at the correct depth.
- Maximum treatment economy with 200 preloaded doses in each injector.

- **FASTER RESTYLANE INJECTOR WITH THIN WALL NEEDLE:**

Both injectors are now available with the new and innovative Thin Wall Needle. The new needle has improved

RESTYLANE

The Restylane family of products includes Restylane, Restylane-Lidocaine, and Restylane-Lidocaine Perlane.

How does Restylane work?

Restylane adds volume and fullness to the skin to correct moderate to severe facial wrinkles and folds, such as those around the mouth. Restylane works immediately by adding volume to smooth away wrinkles. A clear gel formulation of hyaluronic acid, which is naturally occurring in the body, Restylane is eventually broken down naturally.

RESTYLANE, THE FIRST AND ONLY FDA-APPROVED DERMAL FILLER FOR LIPS IN PATIENTS OVER 21 YEARS OLD

Restylane is the first and only FDA-approved dermal filler for lip enhancement in patients over 21 years old. So it's only natural with all this focus on lips, that lipstick is one of the most-purchased cosmetics. It's also

Where can the Restylane family of products be used?

The Restylane family can be used to add volume and fullness to the skin to correct moderate to severe facial wrinkles and folds, such as those around the mouth. The Restylane family can also be used in other moderate to severe facial wrinkles such as lipstick lines and crow's feet. After treatment, you might have some swelling, redness, pain, bruising, or tenderness. These are typical

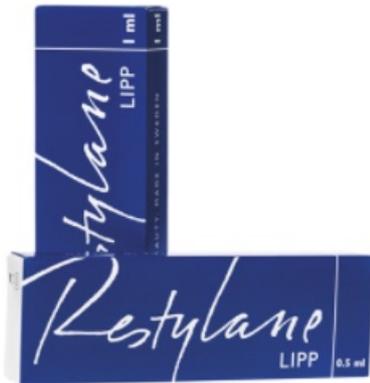

WHAT IS HYALURONIC ACID?

A large percentage of our skin (approximately 56%) is made up from Hyaluronic Acid (HA), a highly abundant natural

NASHA THE SCIENCE BEHIND RESTYLANE:

NASHA (Non-Animal Stabilized Hyaluronic Acid) is the patented technology which is used in all of Restylane. Without this modification the hyaluronic acid would only stay in the tissue for days. Conversely, too much hyaluronic acid can lead to swelling. NASHA is based on a non-animal (biosynthetic) raw material which gives it a high degree of purity. The use of NASHA technology is clinically proven, with over 10 million treatments worldwide and an excellent safety record.

RESTYLANE LIPP

Restylane Lipp is designed specifically to create beautifully shaped lips. Restylane Lipp gives your lips a
Restylane Lipp is tailored for:

- Creating lip volume in the body of the lip to boost fullness
